

Slide 1: Title Slide

Student Management System

Using C++

Presented By:

K. Purna Sri

Branch: AI

Roll No: 25A31A4377

College:

Pragati Engineering College

Slide 2: Introduction

- Student Management System is a simple application used to store and manage student information.
- It helps users maintain records efficiently and reduces manual work.
- The project is developed using the C++ programming language.
- It demonstrates basic programming and Object-Oriented Programming concepts.

Slide 3: Objectives

- To add student details easily
- To display stored student records
- To manage student data efficiently
- To understand OOP concepts in C++
- To improve programming knowledge through a mini project

Slide 4: Technologies Used

- C++ Programming Language
- Object-Oriented Programming (OOP)
- Functions
- Classes and Objects
- Menu Driven Concepts

Slide 5: Features

- Add new student details
- Display student information
- User-friendly menu driven interface
- Simple and easy operations
- Efficient data handling

Slide 6: Advantages

- Easy to understand and use
- Fast and simple record management
- Helps beginners learn C++ concepts
- Improves logical thinking and coding skills
- Useful academic mini project

Slide 7: Conclusion

- This project helps improve C++ programming skills.
- It provides practical knowledge of real-time applications.
- The project is useful for beginners to understand student record management.
- It is also helpful for creating a strong GitHub project portfolio.

Slide 8: Thank You

Thank You

Have a Nice Day ■
